Profile Completion: 100%

Employment history

Devops

Position: Backend developerr

Duration: 01.05.2023 - 01.05.2024

Location: Uzbekistan Tashkent

As a Java Developer at DevOps, I contributed to the design, development, and deployment of scalable backend solutions, focusing on microservices architecture. Over the course of 2 years, I worked with a variety of technologies, including Spring Boot, Spring Data JPA, and Docker, to build efficient and reliable systems. I was responsible for creating RESTful APIs, optimizing SQL queries in PostgreSQL, and implementing gRPC for high-performance communication between services. Additionally, I gained experience with task scheduling and automation within Spring, ensuring smooth and reliable operations across projects. My role required close collaboration with cross-functional teams to meet project goals, improve application performance, and deliver high-quality solutions that aligned with client expectations.

Education

Pdp IT academy

Degree: Bachelor

Duration: 01.03.2022 - 01.03.2023

Faculty: Java Backend Development
